

WE'RE HIRING!

SENIOR SOFTWARE ENGINEER (JAVA)

WATERLOO

ACSONE sa/nv (<https://acsone.eu>) develops tailor made high-quality software solutions for clients in Europe, based on open-source technologies and open standards. To reinforce its custom business applications project teams, ACSONE is looking for a Senior Software Engineer with a Java background.

If you recognize yourself in most of these

- Passionate about software development and open-source technologies;
- Efficient and autonomous;
- Focused on software development, highly interested in clean code and modern software architecture;
- Expert in Java (language and related frameworks) and good knowledge of some other languages (HTML5, modern JavaScript, TypeScript, python...);
- Curious about emerging technologies and frameworks;
- Communicate designs in a clear way, sharing technical solutions with others;
- Comfortable with customers, can explain complex technical matters in a didactic way;
- Holding a relevant master degree (in computer science, engineering, mathematics, ...);
- French or Dutch speaking, with a good command of English.

And you would like to

- Elaborate technical solutions to challenging business requirements;
- Deliver high-quality software, being part of a very efficient team;
- Use modern software development methods in a self-organized team;
- Work with the latest technologies;
- Learn every day while adding value to the team;
- Be part of a human sized company that cares about his employees;
- Meet the customer and understand his business in order to provide the best fitted software.

Contact us

Then contact us and get this new job in a friendly and dynamic working environment, on challenging and really interesting projects. Besides the benefits of working in a human-sized company, with great colleagues and involved managers, you'll get an attractive salary package, regular training and the opportunity to continuously evolve with the company, either in a technical path or in a business path.

You will be based in our Waterloo office, with part-time remote work possibilities.

Nearly convinced? Need more details? Contact us using <http://acsone.eu/jobs> or send an e-mail to jobs@acsone.eu. We will be more than happy to meet you and find out if you/we are the perfect match.

acsone

Specific experience sought

- ✓ A relevant master degree (computer science, engineering, mathematics, etc).
- ✓ Approx 5 years field experience in software development.

While we believe a good grasp of concepts is more important than specific technologies, we expect you have gained hands-on experience with the following parts of the Java ecosystem:

- Java 9 and up
- One of the biggest Java frameworks like Spring, Micronaut, Quarkus (or even Vert.x) and their underlying concepts (JPA, Hibernate, bean-validation, inversion of control, ...)
- Build tools such as Maven or Gradle.
- Testing frameworks such as JUnit, Mockito or Spock.
- REST/JSON services and how to build and consume them in Java

Of course, generic software engineering experience is important too:

- Issue tracking tools (Redmine, Jira, ...)
- Version control (git)Productivity tools (IDE's)
- Agile methods

We also value additional experience in the following areas:

- CI/CD, DevOps
- Front-end development (modern JavaScript or TypeScript)
- Python
- XML-based editorial systems
